PROFESSIONAL SUMMARY

Backend engineer with 3+ years building production Node.js and TypeScript services. At Entugo, a multi tenant restaurant loyalty SaaS, designed and built a six service backend (Auth, Payments, Points, Referrals, Notifications, Cron) exposing around 200 API endpoints behind a central API Gateway, with JWT and OAuth authentication, RBAC, Stripe and Razorpay billing, async job queues and a 551 case automated test suite. Comfortable owning a service from schema design and API contract through deployment and production fixes.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL

Backend: Node.js, Express.js, NestJS, Microservices, API Gateway, REST API design, GraphQL, Background jobs, Rate limiting

Auth & Security: JWT, OAuth 2.0 (Google), RBAC, Session management, bcrypt, API key management

Payments: Stripe subscriptions, webhooks, refunds, idempotency handling, retry logic, Razorpay

Databases: PostgreSQL, MySQL, MongoDB, Redis, Prisma ORM, relational schema design and migrations

Messaging & Jobs: Async job queues, retry and backoff, SendGrid, OTP flows, cron scheduling

DevOps: Docker, Docker Compose, Linux servers, Nginx, GitHub Actions, CI/CD

Testing: Vitest, Cypress, integration and unit testing, dedicated test databases

EXPERIENCE

Software Engineer

Nov 2024 - Present

Entugo LLC

Remote

- Architected a six service backend (Auth, Payments, Points, Referrals, Notifications, Cron) behind a centralized API Gateway, so each service scales independently and RBAC is enforced in one place across four portals.
- Defined the service contracts and module boundaries for around 200 API endpoints and led a 3 engineer team building against them, so services could be developed in parallel.
- Integrated Stripe subscriptions, webhooks and refunds with idempotency keys and retry logic so a repeated webhook delivery does not create a duplicate charge, and integrated Razorpay alongside it.
- Built the Notifications and Cron services on async job queues with retry and backoff, covering transactional email (SendGrid), OTP verification and scheduled point expiry.
- Modelled the loyalty domain in PostgreSQL with Prisma (points ledger, redemptions, referrals, multi tenant isolation) and built the QR based workflow restaurant staff use to issue and redeem points.
- Wrote an automated suite of 551 automated test cases across 41 Vitest files (29 integration, 12 unit), running against a dedicated PostgreSQL test database in about 71 seconds.
- Structured a TurboRepo monorepo with a shared Prisma client, giving all services one data layer and removing duplicated boilerplate.

Junior Developer

Apr 2023 - Aug 2024

Newwton LLC

Remote

- Hardened a Python NFC tag validation backend, tightening input verification so malformed tags were rejected before reaching the authentication layer.
- Integrated REST APIs across 3+ core React features, fixing auth token refresh edge cases and distributed state bugs behind intermittent failures in the Cryptag NFC flow.

Freelance Web Developer

Jul 2021 - Mar 2023

Fiverr

Independent, Remote

- Ran a solo freelance practice end to end alongside a full time Diploma: client scoping, build, deployment and post launch support.
- Delivered 15+ client web applications with 100% on time delivery and a 5.0/5 client rating across all engagements.

PROJECTS

Restaurant Menu Management System | NestJS, GraphQL, PostgreSQL, TypeScript

- GraphQL backend for menu and category management with typed schemas, resolvers, input validation and role based access control, chosen over REST for client side query flexibility.

MEDILINK | Next.js, Node.js, PostgreSQL, Prisma, Clerk, Razorpay

- Digital health records platform: secure REST routes over Prisma relational models, Clerk authentication with protected route enforcement and Razorpay billing, live at medilink.gladcode.in.

EDUCATION

B.Tech, Computer Science (Minor in IoT)

Aug 2024 - May 2027

Government College of Engineering, Amravati

Diploma, Computer Science

Jul 2021 - Jun 2024

Government Polytechnic, Sakoli

89.37%
