## PROFESSIONAL SUMMARY

Engineer with 3+ years who owns the delivery path as well as the code. At Entugo, runs production for a six service platform on a self managed Linux server: Docker Compose services with PostgreSQL and Redis on the same host behind Nginx, GitHub Actions automation, and Cloudflare R2 and Workers, backed by a 551 case automated test suite. Also built the developer platform, a TurboRepo monorepo with a shared Prisma client. Strongest on Linux, containers and pipeline automation, with the application context to debug across the whole stack.

## TECHNICAL SKILLS

**Hosting & Cloud:** Self managed Linux VPS, Cloudflare (R2, Workers), Cloudinary, Vercel, environment configuration

**Containers:** Docker, Docker Compose, container based service isolation

**CI/CD:** GitHub Actions, automated build, test and deploy pipelines, test gates

**Servers & OS:** Linux, Nginx reverse proxy, process management, environment and secret configuration

**Databases in production:** Self hosted PostgreSQL, Redis, MySQL, Prisma migrations

**Reliability:** Rate limiting, retry and backoff, idempotency, background job scheduling

**Developer platform:** TurboRepo monorepo, shared package tooling, code review standards

**Languages & Scripting:** TypeScript, Node.js, Python, Bash, SQL

**Testing in CI:** Vitest, Cypress, integration and unit suites

## EXPERIENCE

### Software Engineer

Nov 2024 - Present

Entugo LLC

Remote

- Containerized the six service platform with Docker and Docker Compose and set up GitHub Actions build and deploy automation, replacing manual releases.
- Runs production on a self managed Linux server: the services, PostgreSQL and Redis on one host behind an Nginx reverse proxy, with Cloudflare R2 and Workers, environment configuration and service isolation.
- Maintains an automated suite of 551 automated test cases across 41 Vitest files (29 integration, 12 unit), running against a dedicated PostgreSQL test database in about 71 seconds, fast enough to run on every change.
- Built the developer platform: a TurboRepo monorepo with a shared Prisma client that removed duplicated boilerplate and standardized local setup across services.
- Designed the six service topology behind a centralized API Gateway with single point RBAC and rate limiting, letting services deploy and scale independently.
- Runs the Cron service and async job queues with retry and backoff for scheduled and failure prone work, including email delivery and point expiry.
- Led a 3 engineer team and set the review and branching standard for the repository.

### Junior Developer

Apr 2023 - Aug 2024

Newwton LLC

Remote

- Debugged and fixed cross browser and low end device rendering failures in production Three.js components, and resolved auth token and distributed state issues causing intermittent front end failures.
- Hardened a Python NFC tag validation backend so invalid tags were rejected before reaching the authentication layer.

### Freelance Web Developer

Jul 2021 - Mar 2023

Fiverr

Independent, Remote

- Deployed and maintained 15+ client applications on shared and cloud hosting, owning domains, builds and post launch support with 100% on time delivery.

## PROJECTS

**ENTUGO Infrastructure** | Docker Compose, GitHub Actions, Nginx, PostgreSQL, Redis, Cloudflare

- Containerized six Node.js services with Docker Compose on a single Linux server, automated builds through GitHub Actions and fronted the platform with Nginx.

**MEDILINK** | Next.js, Node.js, PostgreSQL, Prisma, Clerk, Razorpay

- Health records platform taken to a fully configured production environment, including database provisioning, auth configuration and payment integration.

## EDUCATION

### B.Tech, Computer Science (Minor in IoT)

Aug 2024 - May 2027

Government College of Engineering, Amravati

### Diploma, Computer Science

Jul 2021 - Jun 2024

Government Polytechnic, Sakoli

89.37%
